INSTALLATION, OPERATION, AND MAINTENANCE MANUAL

MODEL: UF0200

GAS FIRED DIRECT VENT FIREPLACE
S/N 640283 AND UP

This appliance may be installed in an aftermarket permanently located, manufactured home (USA only) or mobile home where not prohibited by local codes.

This appliance is only for use with the type of gas indicated on the rating plate. This appliance is not convertible for use with other gases, unless a certified kit is used.

WARNING:
FIRE OR EXPLOSION HAZARD
Failure to follow safety warnings exactly could result in serious injury, death, or property damage.

- Do not store or use gasoline or other flammable vapors or liquids in the vicinity of this or any other appliance.

- WHAT TO DO IF YOU SMELL GAS:
  • Do not try to light any appliance
  • Do not touch any electrical switch; do not use any phone in your building
  • Leave the building immediately
  • Immediately call your gas supplier from a neighbor’s phone. Follow the gas suppliers instructions
  • If you can not reach your gas supplier, call the fire department

- Installation and service must be performed by a qualified installer, service agency or the gas supplier.

english and french installation manuals available through your local dealer or visit our website at: www.archgard.com

les manuels d’installation en anglais et en français sont disponibles chez votre détaillant local ou en visitant notre site web: www.archgard.com

installer:
leave this manual with the appliance.

1.0 Introduction

Thank You and Congratulations for choosing an Ambiance Gas Fireplace!

The UF0200 is one of the most advanced Direct Vent heaters available today. It is solidly designed using the latest technology and manufactured to the highest quality. It is our aim to provide you with an appliance that brings many trouble-free years of reliable service.

Some of the many features of your UF0200 are:

- **Heater Classification** This fireplace is classified as a heating appliance. Therefore, it uses Direct Vent safety technology and it is suitable for continuously operated zone heating.

- **High Efficiency** This fireplace has one of the highest efficiencies of any Direct Vent gas fireplace heaters, ensuring it is less expensive to operate.

- **Adjustable Fan Speed** This fireplace comes complete with an adjustable six speed circulation fan controlled with the remote.

- **Adjustable Flame** This fireplace provides the ability to adjust the flame aesthetics and heat output to suit the owner's liking and heating needs.

- **Adjustable Lighting** Use the included remote to choose from six levels of accent lighting or leave the light off and allow the flame to provide a flickering glow.

- **Solid Construction** This fireplace is mainly constructed of 16 and 18 gauge galvanized and aluminized coated steel for long life and durability.

- **Optional Accessories** Speak with your local Authorized Ambiance Dealer for a full complement of decorative accessories to suit your home’s decor and personal tastes.

- **Electronic Control System** This fireplace comes standard with the Dynamic Start Advantage. This new electronic ignition system is the latest in fireplace technology. It helps to create a better draft, better flame appearance, less condensation on the glass, and years of carefree operation. See **Section 19.4** for complete explanation of how the system works.

- **Multiple Electronic Pilot Settings** This fireplace uses a gas control valve that is operated by a Multifunction Remote Control. It can be set up as either an Intermittent Pilot Ignition (IPI) system, or Continuous Pilot on Demand Ignition (CPI) system (also known as a Pilot on Demand (POD)).

**CPI vs IPI:**

**Continuous Pilot on Demand Ignition (CPI):** In this mode the pilot runs continuously even when the main burner is off. The Continuous Pilot on Demand Ignition operates on a seven day cycle. If the main burner is not turned on for seven continuous days, the pilot will turn itself off. When the main burner is lit again the cycle repeats. The pilot will remain lit for seven days, even after the main burner is turned off. If the main burner is lit during a seven day timing cycle, the seven day timer will reset.

**Intermittent Pilot Ignition (IPI):** A fuel saving mode in which the pilot is only used when the main burner is on.

This appliance is shipped in IPI mode. IPI mode is often the preferred method, however, there are some situations where it may be preferable to switch the fireplace into CPI mode. For example, in colder climates the glass door or the front of the fireplace could become very cold to the touch. Dynamic Start Advantage will solve most problems experienced by older IPI operated fireplaces.
2.0 Safety Information

Caution

FOR YOUR SAFETY - Do not install or operate your UF0200 without reading and understanding this manual. Any installation or operational deviation from this instruction manual voids the warranty and may prove hazardous.

- This appliance must be installed by a qualified gas installer and the installation must conform to the installation codes
- Provide adequate clearance around air openings into combustion chamber
- Never obstruct front openings
- Provide adequate clearances for proper operation and servicing of the appliance
- This appliance must be properly connected to an approved venting system and must not be connected to a chimney flue serving a separate solid fuel burning appliance
- Flow of combustion and ventilation air must not be obstructed - always provide adequate combustion and ventilation air
- Always provide adequate clearance around the intake and exhaust openings

Safety

- Due to high temperatures, the appliance should be located out of traffic and away from furniture and draperies
- Children and adults should be alerted to the hazards of high surface temperature and stay away to avoid burns or clothing ignition
- If this appliance is installed directly on carpeting, tile, or other combustible material other than wood flooring, the appliance shall be installed on a metal or wood panel extending the full width and depth of the appliance
- Young children should be carefully supervised when they are in the same room as the appliance. Toddlers, young children and others may be susceptible to accidental contact burns. A physical barrier is recommended if there are at risk individuals in the house. To restrict access to a fireplace or stove, install an adjustable safety gate to keep toddlers, young children and other at risk individuals out of the room and away from hot surfaces
- Do not store or place combustibles, gasoline, and other flammable vapors and liquids near the appliance
- Clothing or other flammable material should not be placed on or near the appliance
- **WARNING:** Do not operate appliance with the glass front removed, cracked, or broken. Removal of the glass should be done by a licensed or qualified service person. Do not to strike or slam the glass
- Any safety screen or guard removed for servicing an appliance must be replaced prior to operating
- Installation and Repair should be done by a qualified service person. The appliance should be inspected before use and at least annually by a professional service person. More frequent cleaning may be required due to excessive lint from carpeting, bedding materials, etc. It is imperative that the control compartments, burners and circulating air passageways of the appliance are kept clean
- Under no circumstances should any solid fuel (wood, coal, paper or cardboard, etc.) be used in this appliance
- Keep burner and control compartment clean
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water
- **California Proposition 65 Warning:** This product can expose you to chemicals including Carbon Monoxide, that is an externally vented by-product of fuel combustion, which is [are] known to the State of California to cause cancer, birth defects, or other reproductive harm. For more information, visit www.P65Warnings.ca.gov.

Each Ambiance Gas Fireplace is checked and tested at the factory prior to being packaged and shipped to our dealers and finally installed in your home. Before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and that the electrical system is in working order. The Installation Checklist in Section 5.0 should be used to ensure the proper installation of this gas fireplace heater and to document any deviations from a typical install.

Any alteration to the product that causes carbon or soot deposits that results in any damage or requires cleaning is not the responsibility of the manufacturer.
3.0 Technical Information

3.1 Appliance Certification

This appliance was listed by QAI Laboratory Inc to the following USA and Canadian gas appliance standards.
- CSA P.4.1-15 testing method for measuring annual fireplace efficiency
- CSA 22.2 No.3-M1988(R2014) electrical standard

The listing label is attached to the appliance on the bottom left side of the appliance.
A copy is shown on Section 4.0.

Commonwealth of Massachusetts: This appliance has been manufactured in accordance with Massachusetts code 248 CMR 5.00. Approval Code: G1-0319-387. (https://licensing.reg.state.ma.us/pubLic/pl_products/pb_pre_form.asp).

Please contact Archgard Industries Ltd., if you have any questions regarding the certification of this appliance.

3.2 Installation Codes

This appliance must be installed by a qualified gas appliance installer. The installation must conform with the local codes or, in the absence of local codes, with the current National Fuel Gas Code ANSI Z223.1/ NFPA 54 in the US, or the Natural Gas and Propane Installation Code, CSA B149.1 in Canada. Electrical connections and grounding must conform with local code, or in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70 in the US, and in Canada the current Canadian Electrical Code CAN/CSA C22.1.

We recommend that our gas hearth products be installed and serviced by professionals who are certified in the U.S. by the National Fireplace Institute® (NFI) as NFI Gas Specialists.

This appliance must be installed in accordance with local codes, if any; if none, follow the National Fuel Gas Code, ANSI Z223.1/NFPA 54, or Natural Gas and Propane Installation Codes, CSA B149.1. Electrical connections and grounding must be in accordance with local codes, if any; if none, follow the current CAN/CSA C22.1 in Canada and ANSI/NFPA 70 in the US. This appliance is certified for installation in a bedroom or a bed sitting room. This appliance is only for use with the gas indicated on the rating plate and may be installed in an aftermarket, permanently located, manufactured (mobile) home where not prohibited by local codes. See owner’s manual for details. This appliance is not convertible with other gases, unless a certified kit is used.

WARNING: Improper installation, adjustment, alteration, service, or maintenance can cause injury or property damage. Refer to the owner’s information manual provided with this appliance. For assistance or additional information consult a qualified installer, service agency, or the gas supplier. This appliance must be properly connected to a Direct Vent system in accordance with the manufacturer’s installation instructions.

WARNING: Failure to install this appliance per the manufacturer’s instructions or failure to use only parts specifically approved with this appliance may result in property damage or personal injury.

WARNING: Do not operate the appliance until all sections have been assembled and installed in accordance with the manufacturer’s instructions.

WARNING: Operation of this appliance when not connected to a properly installed and maintained venting system can result in carbon monoxide (CO) poisoning and possible death.

Only doors certified with the appliance shall be used. For use only with barrier part # UA9000, UA9001, or UA9002. Follow installation instructions.

## Comments:

6.0 Appliance Overview

6.1 Appliance Overview

The Proflame II control board and the valve are located below the firebox, hidden by the Valve Access Cover.

The rating plate is located under the firebox, on the left side.

The fan is located under the firebox in the back right side. The fan may be accessed through a panel in the bottom of the firebox, under the burner.

Note: This manual may use images of an unpainted fireplace for the purposes of illustration.

*Left and right side references in this manual correspond with the sides identified in Figure 6.1.01.

6.2 Rating Plate Location

The rating plate is located under the valve access cover, adjacent to the valve and control board. See Section 6.5 for information on how to access the controls.
6.3 Barrier Screen (UA9000 & UA9001)

Note: Barrier screens are packaged separately from the fireplace. There are three options available - see Section 20 for part numbers. UA9001 includes tile finishing strips. See Section 12.3.

Removal

To remove the screen, slide the two retainer tabs on the top of the barrier screen toward the center of the screen, tilt the screen outward and lift from the fireplace.

Installation

To install the screen, insert the two pins on the bottom of the screen in the holes on the bottom of the fireplace. Rotate the top of the screen toward the fireplace. Slide the screen retainer tabs on the top of the screen outwards to secure the screen in place.

WARNING

DO NOT INSTALL THE BARRIER SCREEN WITH THE GLASS DOOR REMOVED.

If barrier becomes damaged, the barrier shall be replaced with the manufacturer's barrier for this appliance (Part Number: UA9000). See the replacement parts list (Section 20) for optional barrier screen kits.
**Installation**

**Barrier Screen With Trim (UA9002)**

**Step 1:** Thread the included bolts in so that about 1/8" (3.175 mm) remains exposed.

**Step 2:** Align the brackets on the trim with the four screws. Hang the trim on the brackets at the desired depth.

**Step 3:** The brackets on the trim are stepped to allow the trim to be spaced out from the front of the fireplace.

**Step 4:** Adjust the spacing to accommodate the installation. Noncombustible facing material may be installed up to the fireplace opening behind the trim.
### 6.4 Glass Door Installation

**WARNING:** Do not operate appliance with the glass front removed, cracked, or broken. Replacement of the glass should be done by a licensed or qualified service person. Do not attempt to remove the glass door when the appliance is hot. Be sure there are no fingerprints left on the glass panels during install or when cleaning as high temperatures can bake these prints on permanently. Inspect the door gasket to ensure no damage has occurred when installing the glass door.

**Step 1:** Hook the bottom of the door in the lower spring assembly on the firebox. Rotate the door up.

![Figure 6.4.01:](image)

**Step 2:** Ensure the bolt on the upper door spring is centered on the door latch on both sides.

![Figure 6.4.02:](image)

**Step 3:** Lift the door spring up and over the door latch. The door latch will pass through the cut-outs on the door buckle.

![Figure 6.4.03:](image)

**Step 4:** Make sure the upper springs are fully engaged with the door latches.

![Figure 6.4.04:](image)

#### If Your Glass Breaks

In the event your glass cracks or breaks, replace the original door assembly with an Ambiance replacement door assembly (part number URP-893-0000). The glass door and frame assembly must be replaced as a complete unit. Remove the barrier screen (See Section 6.3) and remove door as per the instructions above. Replace with new door assembly and reinstall the barrier screen.

**NOTE:** the NEW door will emit some odor when the appliance is lit. The odor will dissipate after the gasket material within the door has cured. Be sure there are no fingerprints left on the glass panels as high temperatures can bake these prints on permanently.

**Warning:** Only doors certified with the appliance shall be used. Do not use substitute glazing materials.
6.5 Accessing The Controls

To access the control board or valve:
1. **Ensure the fireplace is off and cool.**
2. Remove the barrier screen (See Section 6.3).
3. Rotate the valve access cover backward and lift to remove from the fireplace.

![Image](image.jpg)

**Figure 6.5.01:**
To install the valve access cover, drop it in place.
Reinstall screen prior to operating this appliance. Never operate this fireplace without the barrier screen in place.
Installation

7.0 Electrical Connections

The UF0200 comes complete with an adjustable 6 speed fan and variable lights wired directly to the main control module. Do not cut or remove the grounding prong from the main power supply plug.

CAUTION: Label all wires prior to disconnection when servicing.

NOTE: This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI / NFPA 70, or the Canadian Electrical code, CSA C22.1.

Before you begin:
• Remove the barrier screen (see Section 6.3)
• Remove the glass door assembly (see Section 6.4)
• Remove the valve access cover (See Section 6.5)

To supply power to the fireplace:

Step 1: Pass the household wiring through the opening on the right side of the fireplace.

Step 2: The junction box is located on the right side of the control board. It may be removed by removing the two (2) 1/4" Tek Screws if necessary.

Step 3: Pass the wire through the strain relief and secure in place. Wire according to local code using the receptacle and electrical plate included with this fireplace.

Step 4: Plug the three-pronged plug from the control board into the receptacle.
WARNING

The nailing flange must be attached to fireplace. Do not remove.
9.0 Prepare The Fireplace

9.1 Installation Overview

<table>
<thead>
<tr>
<th>NOTE</th>
</tr>
</thead>
<tbody>
<tr>
<td>This product must be installed by a qualified installer. The installer should follow the procedure best suited for each specific installation.</td>
</tr>
</tbody>
</table>

1. Frame an opening for the fireplace, allowing for vent installation and type of installation (corner or flat wall application).
2. Bend side nailing flange tabs.
3. Attach nailing flange extension to fireplace.
4. Attach heat shield to nailing flange extension.
5. Insert fireplace into framing.
6. Install hearth (if applicable).
7. Complete electrical hook-up.
8. Complete gas line installation.
9. Complete venting installation.
10. Secure fireplace to framing with nailing flanges. Verify all clearances.
11. Install facing material (refer to Section 12.0 for clearance information), mantel or cabinetry.
12. Install the optional panel set. Many options are available from your local Ambiance dealer.
13. Install the logs, glass door assembly, and barrier screen.
14. Verify proper operation of fireplace and all components.

PLACEMENT CLEARANCE REQUIREMENTS
- This fireplace must be installed on a level surface capable of supporting the fireplace and venting
- Fireplace must be placed directly on wood or non-combustible surface (not linoleum or carpet) extending entire depth and width of fireplace
- Facing material must be all non-combustible (see Section 12.0 for detailed clearance information)
- Due to high surface temperatures, fireplace should be located out of traffic and away from furniture and draperies
- This fireplace may be installed in a bedroom (see local codes)
- Please be aware of the large amount of heat this fireplace will produce when determining a location

9.2 Nailing Flange Tabs

<table>
<thead>
<tr>
<th>CAUTION</th>
</tr>
</thead>
<tbody>
<tr>
<td>Always install nailing flange extension regardless of installation variances.</td>
</tr>
</tbody>
</table>

Side Nailing Flanges
Bend the nailing tabs to suit the facing material (see Figure 9.2.01 and Figure 9.2.02).

Figure 9.2.01:
9.3 Nailing Flange Extension

Attaching The Nailing Flange Extension
Attach the nailing flange extension to the top of the fireplace using the five (5) 1/4" tek screws included in the manual bag.

Adjusting The Top Nailing Flange
The nailing flange may be adjusted by loosening the 1/4" tek screws, sliding the nailing flange as needed, and tightening the tek screws again.

Figure 9.3.01:

Figure 9.3.02:

Figure 9.3.03:
Attaching The Nailing Flange Extension Heat Shield

Slip the nailing flange extension heat shield over the studs located on the back of the nailing flange extension. Use the three (3) nuts included in the manual bag to secure the heat shield in place.

Figure 9.3.04:
10.0 Venting Instructions

**WARNING:** Operation of this heater when not connected to a properly installed and maintained venting system can result in carbon monoxide (CO) poisoning and possible death. The appliance must not be connected to a chimney flue serving a separate solid fuel burning appliance.

**WARNING**
Consult the local and international codes to assure adequate combustion and ventilation air is available.
Flame height and appearance will vary depending upon venting configuration and type of fuel used.
Venting requirements apply to both Natural and LP gas.

Refer to the vent manufacturer’s installation manual for complete installation instructions. Installation must conform with the venting requirements and restrictions as outlined in this manual. Provide a means for visually checking vent connection to fireplace after fireplace is installed.

(2) 45⁰ degree elbows may be used in place of (1) 90⁰ elbow. Always maintain a minimum 12" (305 mm) span between each 90⁰ bend in the vent run.

**IF INSTALLING FLEX PIPE SYSTEMS:**
- More than a 30 degree bend constitutes a 45 degree elbow
- More than a 45 degree bend constitutes a 90 degree elbow
- More than a 90 degree bend is not permissible
- Refer to vent manufacturer’s installation manual for more information.

**Horizontal Venting Specifications:**
- Horizontal sections require 1/4" (6 mm) rise for every 12" (305 mm) of travel
- Horizontal sections must be supported to prevent sagging. See vent manufacturer’s installation manual for more information
  - As a general guideline; a flex line should be supported every 2 - 3’ (609.6 - 914.4 mm) and rigid pipe should be supported every 4 - 6’ (1219.2 - 1828.8 mm)
- This fireplace must be installed so as to prevent accumulation of condensate in the venting system
Typical Venting Configuration

**Figure 10.0.04:** Flashing Installation
10.1 Vent Run Guide

Horizontal Vent Sections rise 1/4"/ft (21mm/m)

- Setting 1
- Setting 2

**NOT ALLOWED**

- The restrictor must be removed when below the dotted line for installations over 2000 ft. See Section 18.13.

**Figure 10.1.01:**

- 1' - 1' 11.9" vertical, one 90° elbow can be used.
- 2' - 2' 11.9" vertical, two 90° elbows can be used.
- 3' - 3' 11.9" vertical, three 90° elbows can be used.
- 4' vertical and above, four 90° elbows can be used.

- Vent height is measured from the top of the fireplace.
- Nailing flange extension is not shown installed for clarity.
- Two 45° elbows = one 90° elbow.
- See Section 10.5 for snorkel use.
10.2 Vent Restrictor Configuration

There are two possible vent restrictor settings based on venting configuration. This fireplace is shipped with the restrictor in the Setting 1 position.

Follow the chart in Section 10.1 for recommended settings. It is important to remember each installation is unique and affected by various factors including venting configuration, altitude, and climate. Use the following steps to adjust the vent restrictor.

Before installation:
• Disconnect gas and electrical supply to the fireplace (including backup batteries)
• Remove the barrier screen (see Section 6.3)
• Remove the glass door assembly (see Section 6.4)

Step 1: Remove the 1/4" Tek Screw from the restrictor.

Step 2: Slide the restrictor into the Setting 2 position.

Step 3: Insert the screw that was removed in Step 1 to secure the restrictor in the Setting 2 position.

Note: The restrictor must be removed for high altitude installations (over 2000 ft.) if the venting falls within the area specified in the chart in Section 10.1. See Section 18.13 for information on removing the vent restrictor.
### 10.3 Third Party Venting Components

**ATTENTION**

NO OTHER VENTING SYSTEM OR COMPONENTS MAY BE USED.

Part numbers shown are correct at the time of printing and should be confirmed with the manufacturer prior to purchase. Follow manufacturer instructions for installation of termination.

**Notes:**
1) In accordance with the current CSA B149.1, Natural Gas and Propane Installation Code.
2) In accordance with the current ANSI Z223.1/NFPA 54, Natural Fuel Gas Code.
* Recommended to prevent condensation on the window.
† A vent shall not terminate directly above a sidewalk or paved driveway that is located between two single family dwellings and serves both dwellings.
‡ Permitted only if veranda, porch, deck, or balcony is fully open on a minimum of two sides beneath the floor.

**WARNING**

A safety cage may be required to cover a horizontal termination if the termination is located near a walkway. See local codes.
10.5 Snorkel Termination Installation

- Follow snorkel termination manufacturer's installation instructions and local codes.
- The vertical rise of a snorkel termination can be used in place of a vertical vent rise. Follow the snorkel termination manufacturer's information for installation.
- A snorkel counts as two 90° elbows out of the total number of allowable elbows in the vent run. For example, the installation in Figure 10.5.01 shows the use of three (3) 90° elbows.
- Ensure there is enough vertical venting to accommodate the number of elbows used. Refer to Section 10.1.
- If the snorkel termination is installed below grade, (IE: basement) proper drainage must be provided to prevent water from entering the snorkel termination (see Figure 10.5.01).
- Do not attempt to enclose the snorkel termination in the wall or any other type of enclosure.
- Do not locate snorkel termination where excessive snow or ice build up may occur. Check snorkel termination area after every snowfall and clear if necessary to prevent blockage. If using snow blowers, make sure snow is not directed at the snorkel termination.

Figure 10.5.01
11.0 Framing

11.1 Wall Enclosure Rough Opening

**IMPORTANT**

Framing dimensions should allow for wall covering thickness and fireplace facing materials. If using a hearth, adjust rough opening size as necessary to maintain at least minimum clearance requirements. **Non–combustible facing material** may be applied over (but not directly to) fireplace face. This will prevent facing material from falling off due to heat expansion. Do not obstruct the flow of ventilation air.

**WARNING**

Provide adequate clearances around air openings into the combustion chamber. Do not obstruct upper and lower grill openings. Room air enters through lower passage, is heated and exits through upper passage. Blocking these passages may result in overheating, creating a potentially hazardous situation.

Determine exact position of your fireplace, including hearth height, width, and depth (if applicable). If possible, place fireplace in such a manner that vent termination will be between two studs, eliminating the need for additional framing.

Consider height of hearth finish material (stone, brick etc.) when building fireplace platform.

Install fireplace on hard metal or wood surface extending the full width and depth of fireplace.

If masonry is to be used (optional), prepare the necessary foundation for the masonry load. When masonry construction is used, a lintel iron must be used over top of fireplace to support the added weight. Never use this fireplace to support additional weight.

Build hearth to desired size and height. If a hearth extension is desired, combustible material may be used. See Section 12.2.

**FIRE HAZARD**

DO NOT install directly on carpet, vinyl, or any combustible material other than wood.

<td>13.637” (~13 5/8&quot;)</td>
</tr>
</tbody>
</table>

Note: The ceiling height is higher to maintain a 4” clearance to the vent pipe with the required taller vent setup to accommodate the horizontal run required to reach the exterior wall.
11.3 Ventilation Framing

Ventilation framing dimensions are based on Duravent venting components. If other third party venting components are used, refer to the installation instructions from the third party manufacturer for installation information. The following critical dimensions must be maintained regardless of venting manufacturer:

<table>
<thead>
<tr>
<th>Item</th>
<th>Critical Dimensions</th>
</tr>
</thead>
<tbody>
<tr>
<td>Distance from ceiling to horizontal pipe</td>
<td>4&quot; (10.16 cm)</td>
</tr>
<tr>
<td>Thimble framing dimensions</td>
<td>9&quot; (22.86 cm) W x 10&quot; (25.4 cm) H</td>
</tr>
</tbody>
</table>

Ceiling height and the height to the bottom of the thimble shown are based on a minimum vent run. These values may vary depending on the requirements of each installation.

**WARNING**
Vent cap location must be in compliance with guidelines in Section 10.4 of this manual. DO NOT RECESS VENT CAP INTO WALL OR SIDING.
12.0 Clearances to Combustibles

**WARNING:** Failure to position the parts in accordance with these diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury or loss of life.

**WARNING:** TOP NAILING FLANGE EXTENSION MUST BE ASSEMBLED AND ATTACHED TO FIREPLACE. DO NOT REMOVE. TOP NAILING FLANGE EXTENSION IS NOT LOAD BEARING

12.1 Mantel Clearances

Mantel clearances are measured from the top of the appliance opening.

Figure 12.1.01
12.2 Sidewall Clearances
Maintain a minimum of 4” (10.16 mm) clearance from the side of the glass door to sidewalls or mantel supports.

Figure 12.2.01

12.3 Optional Hearth Installation
Any hearth extending 12” or less from the front fireplace must be constructed of non-combustible material. A hearth is not required for installation.

Figure 12.3.01
12.3 Finishing (UA9001)
Install the finishing strips using the twelve (12) 1/8" rivets included. Never place combustible material over the face of the fireplace. See Figure 12.3.02 for finishing details.
13.0 Gas Connections

Before connecting the appliance to the gas supply line, double check that the appliance you have purchased is designed for the gas type you are using. The gas type markings are located on the rating plate (See Section 4.0 and Section 6.2) and also on the appliance's gas valve.

Adequate clearance for proper installation and checking of the gas connections must be provided. All gas connections must be checked for gas leaks.

After securing the fireplace to the framing, have your gas supplier or a qualified gas fitter run a gas supply line to the install location. The line must be properly sized and fitted according to the installation codes. Immediately upstream of the supply connection, the fitter shall provide an accessible manual shut-off valve. When connecting the supply line to the gas valve, the installer shall brace the gas valve to ensure that the gas valve is not moved from its bracket. If the valve is not braced when the supply line is connected, the valve may be moved and cause a "break" in the main burner supply line. Such damage is not covered by the manufacturer’s warranty.

**CAUTION:** The appliance and its individual shut-off valve must be disconnected from the gas supply piping system during any pressure-testing of that system at test pressures in excess of 1/2 psig (3.5 kPa). The appliance must be isolated from the gas supply piping system by closing its individual manual shut-off valve during any pressure-testing of the gas supply piping system at test pressures equal to or less than 1/2 psig (3.5 kPa). Failure to do so will damage the appliance’s gas valve. Such damage is not covered by the manufacturer’s warranty.

**Natural Gas Pressure Settings:**
The inlet supply or line pressure must be a minimum of 5.0” W.C. (1.24 kPa) and a maximum of 14.0” W.C. (3.48 kPa). The orifice is a #38 DMS (2.58 mm) drill size.

<table>
<thead>
<tr>
<th>ELEVATION</th>
<th>INPUT RATING</th>
</tr>
</thead>
<tbody>
<tr>

<td>27,000 BTU/hr (7.9 kW) less 4% per 1000 ft. (305 M) above sea level.</td>
</tr>
</tbody>
</table>

Please contact your local distributor for the appropriate orifice size you require.

**Propane Pressure Settings:**
The inlet supply or line pressure must be a minimum of 11.0” W.C. (2.74 kPa) and a maximum of 14.0” W.C. (3.48 kPa). The orifice is a 1/16" (1.59 mm) drill size.

<table>
<thead>
<tr>

<td>27,000 BTU/hr (7.9 kW) less 4% per 1000 ft. (305 M) above sea level.</td>
</tr>
</tbody>
</table>

Please contact your local distributor for the appropriate orifice size you require.

13.1 Clocking Procedure
(for high altitude derating)

**IMPORTANT:** THE INPUT RATING SHOULD ALWAYS BE CHECKED WHEN FIRST FIRING THIS APPLIANCE.

Before you begin, shut off all other gas appliances including any standing pilots. Light the fireplace and wait 15 minutes. Clock the time to burn 1ft³ of gas on the meter. Check with your gas supplier for the gas BTU content at your elevation. Input is the rate of flow multiplied by the heating value of the gas (cubic feet/hour x BTU per cubic feet). **Note:** This assumes a dry gas meter at 1/2 psi. If using a 2 psi dry gas meter the unit will rate lower as the calculation has to correct for the higher pressure in the meter. If the unit is over-rated, contact your authorized Ambiance dealer. The following calculation equation gives a rough estimation as it does not correct for temperature and pressure.

**Rough Calculation Equation:**

\[
\frac{3600}{\text{time to burn 1ft}^3 \text{ gas in seconds}} \times \frac{\text{gas caloric value in BTU/ft}^3}{\text{in BTU/hr}} = \text{Rating in BTU/hr}
\]
13.2 Supplying Gas

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect power supply to the fireplace (including backup batteries)
- Remove the barrier screen (see Section 6.3)
- Remove the valve access cover (see Section 6.5)

NOTE: The gas line can be brought in from either the left or the right side of the fireplace. The connection of the supply line to the valve is made on the left side of the valve.

**Step 1**: Locate the flex line in the manual bag

**Figure 13.2.01:**

**Step 2**: Connect the flex line to the inlet side of the valve using two 3/4" wrenches.

**Figure 13.2.02:**

**Step 3**: Ensure the shut-off valve is in the OFF position before supplying gas to the other side of the valve.

**Figure 13.2.03:**
14.0 Conversion Kit Instructions

**IMPORTANT:** This fireplace is Natural gas ready. If converting to LP gas, follow instructions below.

**WARNING:** This conversion kit shall be installed by a qualified service agency in accordance with the manufacturers instructions and all applicable codes and requirements of the authority having jurisdiction. If the information in these instructions is not followed exactly, a fire, explosion or productions of carbon monoxide may result, causing property damage, personal injury or loss of life. The qualified service agency is responsible for proper installation of this kit. The installation is not proper and complete until operation of the converted appliance is checked as specified in the instructions supplied with the kit. Refer to appliance owner’s manual or product data plate for proper inlet and manifold pressure adjustments and orifice sizing.

**IMPORTANT:** For high altitude installations above 4500 ft (1372 meters), consult local gas distributor or the authority having jurisdiction for proper derating methods.

KIT NUMBERS: UA2500 for LP gas and UA2400 for Natural Gas

KIT INCLUDES:
- Gas conversion label (303-0128)
- Burner orifice (part number 301-0068-0.0625, 1/16" for LPG) (part number 301-0068-38, #38 DMS for NG)
- Instruction Sheet
- SIT 885 Valve conversion kit c/w instructions & gas type label

**WARNING:** SHUT OFF GAS SUPPLY AND ELECTRICAL POWER TO FIREPLACE

SHUT OFF GAS SUPPLY BEFORE DISCONNECTING ELECTRICAL POWER

14.1 Prepare the Fireplace

- Remove the barrier screen (see Section 6.3), glass door (see Section 6.4), logs and embers (see Section 16.0), and brick panels or firebox liner (if applicable - see Section 15.0)
- Remove the valve access cover to access the valve (see Section 6.5)
- Remove the masking plate (see Section 18.11), and burner surround (see Section 18.14)
- Remove the burner (see Section 18.15)

Remove the burner orifice using a 1/2” wrench. Replace with the orifice supplied with the conversion kit. Use a small amount of pipe sealant on the threads of the orifice mount. Do not use too much as it can block the orifice.

**Figure 14.1.01:**

14.2 Pilot Conversion

Using a 7/16” wrench and loosen the pilot hood 1/4 turn. Slide the tab at the bottom of the orifice hood all the way so the red side (propane) with the hole in it is showing. Tighten the pilot hood back up so that it is lined up with the two probes on both sides of the pilot assembly.

**Figure 14.2.01:**
14.3 Convert the Gas Valve

**WARNING:** Installation of this conversion kit must only be undertaken by a qualified and certified gas appliance installer.

Verify that the following items are present in the package:
- Pressure regulator assembly (E)
- Two (2) screws (F)
- Identification label (G)
- Installation instructions (this document)

1. Shut off the gas supply to the valve and shut down the electric supply.
2. See Figure 14.3.01. Using a Torx T20, or slotted screwdriver, remove and discard the two (2) pressure regulator mounting screws (A), pressure regulator tower (B), and the spring and diaphragm assembly (C), (if applicable).
3. Ensure the rubber gasket (D), which is prefitted as part of assembly (E), is properly positioned, see Figure 14.3.02, otherwise fit the gasket as shown Figure 14.3.02.
4. Install the new STEPPER MOTOR pressure regulator assembly, as shown in Figure 14.3.03 and Figure 14.3.04. Use the supplied screws (F), M4 x 0.7 threaded, length of thread L=( 16 mm + 0 - 0.5 mm ), steel material, resistance class 8.8 (see Figure 14.3.05).
5. Manually thread the two conversion kit mounting screws into the valve body. Use a standard screwdriver or T20 Torx bit and tighten to the screws with a fixing torque of 25lb-in ± 5%. **IN THE EVENT THAT THE THREADS OF THE VALVE ARE STRIPPED OR DAMAGED, REPLACE THE VALVE.**
6. Install the enclosed identification label (G) to the valve body where it can be easily seen.
7. Make STEPPER MOTOR and valve electrical connections, apply gas to system and relight appliance according to manufacturers instructions.
8. With the main burner ON, test the new pressure regulator assembly for leaks using a soap solution.
9. Relight the main burner and verify proper burner ignition and operation. **WARNING:** Installation should be carried out in a clean environment. **WARNING:** This modulating conversion kit must ONLY be applied as part of a conversion kit supplied by the APPLIANCE MANUFACTURER. **WARNING:** Correct operation of the system cannot be guaranteed if the conversion kit or valve has been dropped or has sustained a strong impact. **INSTALLER NOTICE:** These instructions must be left with appliance.

14.4 Complete the Conversion

- Reinstall the burner (see Section 18.15), burner surround (see Section 18.14), masking plate (see Section 18.11), brick liners or firebox liner (if applicable - see Section 15.0), logs and embers (see Section 16.0), and glass door (see Section 6.4)
- Turn on the gas and electrical supplies
- Turn on the fireplace so the burner is on
- Check for leaks at all connections

Test inlet and outlet pressure (See Section 18.3). Visually check pilot flame. Flame should envelope top of the flame sensor and extend forward onto the burner. To adjust pilot turn the pilot adjustment screw on the control valve clockwise to decrease or counter clockwise to increase pilot flame. Clock the rating as shown in Section 13.1. Adjust the primary air according to specifications in this manual or as found on the rating plate.
- Turn fireplace off
- Affix gas type label to the rating plate label (See Section 6.2 for rating plate location)
- Complete the conversion label and affix to valve assembly plate
- Reinstall the valve access cover (see Section 6.5) and barrier screen (see Section 6.3)
15.0 Firebox Liner Installation

15.1 Brick Panel Installation

The following steps highlight the procedure for installing brick panel firebox liners. Handle the panels with care as they are delicate. Inspect the panels to ensure that no damage has occurred inside the package. Please report any damage immediately to your Authorized Ambiance Dealer. Installation is the same regardless of which style panel set is being installed.

Before you begin:
• Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
• Remove barrier screen (see Section 6.3)
• Remove Glass Door (see Section 6.4)

Step 1: Remove the two (2) 1/4" Tek Screws in the upper front corners of the firebox under the lights.

Step 2: Remove the three (3) 1/4" Tek Screws securing the masking plate at the back of the firebox.

Step 3: Pull the masking plate from the firebox.

Step 4: Make sure the panel retainer clips included with this fireplace are nearby before continuing with installation.
**Step 5:** Place the rear panel in the back of the firebox with the thick grout line at the top.

**Step 6:** Continue to hold the rear panel while placing the left or right side panel.

**Step 7:** Install the first panel retainer clip to hold the left or right side panel in place.

**Step 8:** Install the other side panel using the remaining panel retainer clip.

**Step 9:** The side panels will hold the rear panel in place. Insert the top panel at an angle, rotate upward and adjust so that the upper panel rests on top of the other panels.

**Figure 15.1.05:**

**Figure 15.1.06:**

**Figure 15.1.07:**

**Figure 15.1.08:**

**Figure 15.1.09:**

**Figure 15.1.10:** Installation Complete
15.2 Reflective Glass Installation

The following steps highlight the procedure for installing Reflective Ceramic Glass liner. We recommend using clean cotton gloves when handling panels. Handle the panels with care. Inspect the panels to ensure that no damage has occurred inside the package. Please report any damage immediately to your Authorized Ambiance Dealer.

Before you begin:
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove barrier screen (see Section 6.3)
- Remove Glass Door (see Section 6.4)

Step 1: Remove the screws located in the upper corners of the firebox near the lights.

Step 2: Remove the screws located in the rear corners of the burner.

Step 4: Reinstall the burner screws with the bottom glass panel spacers included with the Reflective Ceramic Glass set.

Step 5: Place the rear panel in the back of the firebox, behind the tek screws at the back of the burner.
**Step 6:** Continue to hold the rear panel as you slide the left or right side panel between the two bends on the lower spacer.

![Figure 15.2.05:](image)

**Step 7:** Install the right side glass retainer using one of the screws removed in **Step 1**.

![Figure 15.2.06:](image)

**Step 8:** Install the other side panel between the two bends on the lower spacer and secure in place using the upper side glass retainer.

![Figure 15.2.07:](image)

**Step 9:** Install the top panel at an angle. Rotate the other side up and center the top panel on top of the left side, right side, and rear panels.

![Figure 15.2.08:](image)

**Figure 15.2.09:**

**Installation complete**

![Figure 15.2.10:](image)
### 16.0 Log Set Installation

**WARNING**

Failure to position the logs in accordance with the preceding diagrams or failure to use only parts specifically approved with this appliance may result in property damage or personal injury. Never use unapproved burner media such as rock wool or similar material. The use of unapproved burner media may cause damage or injury and will void product warranty.

The high definition log sets are designed to provide a life-like fire bed from the day they are installed, through the years that follow. Care must be given when handling the logs as they can be damaged or broken if not handled properly. After opening the log set package, inspect the logs to ensure that no damage has occurred inside the package. Please report any damage immediately to your Authorized Ambiance Dealer.

Gas and vent connection must be made before installing the embers and logs on the burner.

**CAUTION:** DO NOT block pilot opening with embers.

**NOTE:** Improper placement of logs and embers may cause soot accumulation on the internal parts and glass. This is not covered under warranty. Do not use broken or damaged logs.

---

**Figure 16.0.01:** High Definition Logset Overview

**IMPORTANT**

When placing embers around the pilot shield take care to not block the pilot opening. Failure to keep the opening clear of embers or media will cause a delayed ignition. Embers should also be placed so they do not completely block burner ports. **DO NOT** block secondary air gaps around burner.
Installation

**Step 1:** Align the holes on the bottom of Log 1 with the pins at the back of the burner.

**Step 2:** Carefully push Log 1 onto the pins.

**Step 3:** Place a row of embers along the front of Log 1. Avoid placing embers over the burner openings.

**Step 4:** Place Log 2 on the pins located on the left side of the burner.

**Step 5:** Place Log 3 on the pins located on the right side of the burner.

**Step 6:** Place more embers along the front of Log 2 and Log 3. Avoid placing embers over burner openings.
**Step 7:** Align Log 7 on the pins located on the middle of the burner.

**Step 8:** Fill the space to the left of Log 7 with embers. Avoid blocking burner ports.

**Step 9:** Make sure the secondary air supply, including the gap around the burner, is NOT blocked by embers.

**Step 10:** Place Log 4 on top of Log 3 and the pin located behind Log 7.

**Step 11:** Fill in the area around Log 4 with embers. Avoid blocking burner ports.

**Step 12:** Place Log 5 across Log 4 and Log 1.
**Installation**

**Step 13:** Place Log 6 on the pin located in Log 1 and rest the front on Log 2.

![Figure 16.0.14:](image1)

**Step 14:** Place embers evenly along the burner surround. Do not block the gap that surrounds the burner as this is a source of secondary air.

![Figure 16.0.15:](image2)

17.0 Operation

17.1 Before Lighting

**WARNING:** If you do not follow these instructions exactly, a fire or explosion may result causing property damage, personal injury or loss of life. Do not operate the appliance with the glass front removed, cracked or broken. Replacement of broken glass should be done by a licensed or qualified service person.

Each Ambiance Gas Fireplace is checked and tested at the factory prior to being packaged and shipped to our dealers and finally installed in your home. Ambiance recommends that before leaving this unit with the customer, the installer must ensure that the appliance is firing correctly and that the electrical system is in working order. This will include:

1. Perform leak tests of supply line, gas control valve, supply line from gas control valve and pilot assembly.
2. Clocking the appliance to ensure the correct firing rate (see Section 13.1 of this manual).
3. If required, adjusting the primary air to burner to ensure that the flame does not carbon or soot.
4. Check for proper operation including correct drafting.
5. The fireplace should be turned ON to ensure that the fan is working correctly. After the system has been checked and confirmed that the fan is in working order, refer to the instructions for FIRST FIRE located in this manual.

Use the installation checklist in Section 5.0 to ensure all installation steps have been completed.

**Note:** Any alteration to this product that causes carbon or soot deposits that results in any damage or requires cleaning is not the responsibility of the manufacturer.

Do not store or use gasoline or other flammable vapors and liquids in the vicinity of this or any other appliance.

**WHAT TO DO IF YOU SMELL GAS:**
- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.

Installation and service must be performed by a qualified installer, service agency or the gas supplier.

1. **BEFORE LIGHTING**, smell all around the appliance area for gas. Be sure to smell next to the floor, because some gasses are heavier than air and will settle on the floor.
2. **IF YOU SMELL GAS**, follow the instructions as listed directly above or as shown on the front cover of this manual.
3. Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.
4. This appliance is equipped with an ignition device which automatically lights the pilot and main burner when operating the remote control.

17.2 First Fire

When operated for the first few times, the appliance will emit some odor and fumes. This is due to the heat from the appliance evaporating the oils and solvents used in fabricating the appliance. Close off the room to the rest of the house and open all windows. Keep the room well ventilated, as smoke alarm may sound. Run the appliance for at least 6 hours at maximum setting with blower set to OFF to allow paint to cure (after the installer has checked to ensure the fan is operational). Smoke and fumes caused by the curing process may cause discomfort to some individuals. Clean the glass door after this curing process has completed (see Section 18.1). Be sure there are no fingerprints left on the glass panels as high temperatures can bake these prints on permanently.
17.3 Lighting Instructions

The following information may be found on the fireplace rating plate. See Section 6.2 for the rating plate location.

**FOR YOUR SAFETY READ BEFORE LIGHTING**

**POUR VOTRE SÉCURITÉ VEUillez LIRe AVANT L’ALLUMAGE**

**WARNING:** If you do not follow these instructions exactly, a fire of explosion may result causing property damage, personal injury or loss of life.

**AVERTISSEMENT:** Quiconque ne respecte pas à la lettre les instructions dans la présente notice risque de déclencher un incendie ou une explosion entraînant des dommages, des blessures ou la mort.

A. This appliance has a pilot which must be lighted by a spark igniter. When lighting the pilot follow these instructions exactly.

B. BEFORE OPERATING smell all around the appliance area for gas. Be sure to smell next to the floor because some gas is heavier than air and will settle on the floor.

**WHAT TO DO IF YOU SMELL GAS**

- Do not try to light any appliance.
- Do not touch any electrical switch; do not use any phone in your building.
- Immediately call your gas supplier from a neighbor’s phone. Follow the gas supplier’s instructions.
- If you cannot reach your gas supplier, call the fire department.
- Do not use this appliance if any part has been under water. Immediately call a qualified service technician to inspect the appliance and to replace any part of the control system and any gas control which has been under water.

**LIGHTING INSTRUCTIONS**

**INSTRUCTION D’ALLUMAGE**

1. STOP! Read the safety information above on this label. This appliance is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.
2. Set the remote control switch to “OFF”.
3. Open the lower louvers or remove trim.
4. Turn off all electric power to the appliance.
5. Open the gas isolation valve.
6. Wait 5 minutes to clear out any gas. Then smell for gas, including near the floor. If you smell gas, STOP! and follow “B” in the safety information above (and to the left) on this label. If you do not smell gas, go to the next step.
7. Turn on all electric power to the appliance.
8. Set the remote control switch to “ON”.
9. If the fireplace does not light, the system will cycle through two trials (one minute of audible clicking, thirty seconds of silence, and then another one minute of audible clicking). If the system locks out due to inadequate gas flow, refer to troubleshooting in instruction manual.
10. If the system will not function correctly, follow the instructions “To turn Off Gas To Appliance” below and call your service technician or gas supplier.
11. Replace louver or trim.

**TO TURN OFF GAS TO APPLIANCE**

**POUR COUPER LE GAZ À L’APPAREIL**

1. STOP! Read the safety information above on this label. This appliance is equipped with an ignition device which automatically lights the pilot. Do not try to light the pilot by hand.
2. Turn off all electric power to the appliance if service is to be performed.
3. Open louver or access panel.
4. Turn incoming gas isolation valve to “OFF” position.
5. Close louver or trim.

---

Figure 17.3.1:
17.4 Dynamic Start Advantage

This fireplace comes standard with the Dynamic Start Advantage. This new electronic ignition system is the latest in fireplace technology. It helps to create a better draft, better flame appearance, less condensation on the glass, and years of carefree operation.

How the system works:

When starting a solid fuel wood burning fireplace you build a fire. You start with a little bit of tinder and kindling to create small fire, and then work your way up to larger logs once a draft has been established. Dynamic Start uses the same principle. When you press the "ON" button on the remote control the main burner will light and remain with a low flame for two minutes. This will first establish a draft in the vent and slowly warm up the fireplace. When two minutes have passed, the main burner will automatically ramp up to the high flame (or whichever setting you have established on the remote control).

Figure 17.4.01
17.5 Remote Control Operation

IMPORTANT

The Proflame II Remote is an integrated part of the Proflame II System, which consists of a Proflame II Remote, to be used in conjunction with Integrated Fireplace Control (Proflame II Control Module).

The Proflame II Remote provides for controlling the following hearth appliance functions:

1. Main Burner ON/OFF
2. Main Burner flame modulation (6 levels)
3. Choice of Continuous Pilot on Demand or intermittent pilot (CPI/IPI)
4. Manual, Thermostat, and SMART thermostat functions
5. Comfort fan speed modulation (6 levels)
6. Variable lights (6 levels)

The Proflame II Remote uses a streamline design with a simple button layout and informative LCD display. A Mode Key is provided to index between the features and a Thermostat Key is used for on/off or to index through the thermostat function. Additionally a Key Lock function is provided.

ATTENTION

• TURN OFF THE MAIN GAS SUPPLY DURING INSTALLATION OR MAINTENANCE OF THE RECEIVER DEVICE
• TURN OFF MAIN GAS SUPPLY TO THE APPLIANCE PRIOR TO REMOVING OR REINSERTING THE BATTERIES
• IN CASE OF REMOTE CONTROL MALFUNCTION TURN OFF THE FIREPLACE BY REMOVING POWER SUPPLY (INCLUDING BACKUP BATTERIES)
• FOR INSTALLATION/MAINTENANCE SWITCH OFF THE FIREPLACE BY REMOVING POWER SUPPLY (INCLUDING BACKUP BATTERIES)

WARNING

THE REMOTE AND RECEIVER ARE RADIO FREQUENCY DEVICES. PLACING THE REMOTE IN OR NEAR METAL ENCLOSURES MAY REDUCE THE SIGNAL RANGE.

Wall Mount Remote (optional)

Figure 17.5.03
Initializing the System for Handheld / Wall Mount Remote Operation

1. Connect IFC Control Module to AC power supply. A single “beep” will indicate the presence of power. NOTE: This will initiate Pilot Start-up in Manual Mode. The pilot will spark repeatedly and ignite if gas has been supplied to the unit. Sync the control board to the remote to turn main burner and pilot off using the steps below.

2. The ON/OFF Override Jumper on the control board must be connected.

3. Press and hold the red SW1 button until the IFC module beeps three (3) times and/or the amber LED illuminates indicating the module is ready to synchronize with the remote.

4. Within ten (10) seconds push the ON/OFF key on the remote. The IFC module will “beep” four (4) times to indicate that it has successfully synced with the remote. Turn the fireplace OFF using the ON/OFF button on the remote to complete initialization. The remote will now control the fireplace.

5. Install the provided four (4) AA batteries into battery back up holder.

---

**Battery Compartment**

*Figure 17.5.04:*

**Proflame II IFC Module**

*Figure 17.5.05:*

---

**Turn "ON" the Appliance**
With the system OFF, press the ON/OFF Key on the Remote. The Remote display will show other active icons on the screen. At the same time the Receiver will activate the appliance. A single “beep” from the receiver will confirm reception of the command.

**Turn "OFF" the Appliance**
With the system ON, press the ON/OFF Key on the Remote. The Remote display will show the current room temperature. At the same time the Receiver will turn the appliance off. A single “beep” from the receiver will confirm reception of the command.
Operation

Temperature Indication Display

With the system in the OFF position, press the Thermostat Key and the Mode Key at the same time to switch between Fahrenheit (F) or Celsius (C). Verify on the LCD screen the correct designation is visible.

![Temperature Indication Display](image)

Variable Flame Control

The Proflame II IFC has six (6) flame levels. With the system ON and the flame at maximum in the appliance, pressing the Down Arrow Key once will reduce the flame height by one step. Repeat to lower the flame till OFF. With flame OFF in this configuration, fan and lights will still be operational.

The UP Arrow Key will increase the flame height each time it is pressed.

If the UP Arrow Key is pressed while the system is on but the flame is off, the flame will activate in the high setting.

A single beep will confirm reception of the command.

![Variable Flame Control](image)

Fan Speed Control

If the appliance is equipped with a hot air circulating fan, the speed of the fan can be controlled by the Proflame II system. The fan speed can be adjusted through six (6) speeds. To activate this function use the Mode Key to index to the fan control icon. Use the Up/Down Arrow Keys to turn on, off or adjust the fan speed. A single beep will confirm reception of the command.

In manual mode the fan will activate immediately upon burner ignition. Adjust the fan speed to personal preference. Blower will shut off when the burner is extinguished.
Operation

Dimmer Control (Light)

This function is used to control the variable lights. To activate this function use the Mode Key to index to the variable light icon. The intensity of the output can be adjusted through six (6) levels. Use the Up/Down Arrow Keys to adjust the output level. A single beep will confirm reception of the command.

Room Thermostat (Remote Operation)

The Remote Control can operate as a room thermostat. The thermostat can be set to a desired temperature to control the comfort level in a room.

To activate this function:
• Press the Thermostat Key. The LCD display on the remote will change to show that the room thermostat is ON and the set temperature is now active
• To adjust the temperature, press the Up/Down Arrow Keys until the desired temperature is displayed

SMART Thermostat (Remote Operation)

The Smart Thermostat function adjusts the flame height automatically in accordance to the difference between the set point and the actual room temperature. As the room temperature approaches the set point, the Smart Function will modulate the flame down.

To activate this function:
• Press the Thermostat Key until the word “SMART” appears to the right of the temperature bulb graphic
• To adjust the set temperature, press the Up/Down Arrow Keys until the desired set temperature is displayed

NOTE

When the fireplace is started in Smart Thermostat mode:
1. The fan will automatically activate 5min after ignition and shut down 12min after fire is turned off.
Continuous Pilot on Demand / Intermittent Pilot (CPI/IPI) Selection

With the system in “OFF” position press the Mode Key to index to the CPI mode icon.
Pressing the UP Arrow Key will activate the Continuous Pilot on Demand Ignition mode (CPI). Pressing the Down Arrow Key will return to IPI. A single “beep” will confirm the reception of the command.

CPI vs IPI:

Continuous Pilot on Demand Ignition (CPI): In this mode the pilot runs continuously even when the main burner is off. The Continuous Pilot on Demand Ignition operates on a seven day cycle. If the main burner is not turned on for seven continuous days, the pilot will turn itself off. When the main burner is lit again the cycle repeats. The pilot will remain lit for seven days, even after the main burner is turned off. If the main burner is lit during a seven day timing cycle, the seven day timer will reset.

Intermittent Pilot Ignition (IPI): A fuel saving mode in which the pilot is only used when the main burner is on.

This appliance is shipped in IPI mode. IPI mode is often the preferred method, however, there are some situations where it may be preferable to switch the fireplace into CPI mode. For example, in colder climates the glass door or the front of the fireplace could become very cold to the touch. Dynamic Start Advantage will solve most problems experienced by older IPI operated fireplaces.
Operation

Automatic Safety Shut-Off

This system will execute an automatic turn OFF command after a 24hr continuous main burner flame ignition. This allows the system to verify correct safety functions.

Diagnostic Indications Information

**LOW BATTERY CONDITION (Less than 4V):**

- **Remote Control**
  - Battery Icon will appear on LCD remote control display. Replace batteries.

- **Battery Back-up**
  - Red LED indicator will enter a (1) blink sequence. IFC Module will emit a double-beep when it receives an ON/OFF command from the hand held remote. Replace batteries.

**Pilot Flame Error Condition:**
- Red LED Indicator will commence a (2) blink sequence. Contact your dealer if this occurs.

**System Lock Out Condition:**
- Red LED Indicator will commence a (3) blink sequence. Make sure your gas is turned on.
- Make sure pilot sensor is not shorted out.
- Follow reset information above if the module goes into a Lock Out state.

**Key Lock**

This function will lock the keys to avoid unsupervised operation.
- To activate this function, press the MODE and UP Keys at the same time
- To deactivate this function, press the MODE and UP Keys at the same time

**Low Battery Power Detection (Less than 4V)**

**Remote**

The life span of the remote control batteries depend on various factors:
- Quality of the batteries used
- The number of ignitions of the appliance
- The number of changes to the room temperature set point, etc
When the Remote batteries are low, a Battery Icon will appear on the LCD display of the Remote before all battery power is lost. When the batteries are replaced this Icon will disappear.

**BACKUP BATTERY PACK (used when 120V home electrical power is interrupted):**
- Red LED indicator on the IFC Module will enter a (1) blink sequence
- Backup batteries lifespan depends on various factors including battery quality, number of ignitions, changes to room thermostat set point, etc. When batteries are low, a double beep will be emitted from the IFC control module when it receives an ON/OFF command from the remote control
- This is an alert for a low battery condition of the backup batteries and after this double-beep warning, no commands will be accepted until batteries are replaced
- When batteries are replaced a beep will be emitted from IFC control module as soon as powered

![Figure 17.5.13:](image1)

![Figure 17.5.14:](image2)
18.0 Maintenance

**CAUTION:**
Do not conduct maintenance on the appliance while it is operating or while it is still hot. Always verify proper operation after servicing.

18.1 Cleaning and Routine Maintenance

The exterior painted surfaces, glass, and metal plated trims may be cleaned with a soft, non-abrasive cloth and water or a suitable, mild, non-abrasive cleaner. Be sure there are no fingerprints left on the glass panels as high temperatures can bake these prints on permanently.

Regularly:
- Frequent cleaning of the ceramic glass is recommended. We recommend using a good quality ammonia free gas fireplace glass cleaner that is available at any hearth retail location. Take care to avoid scratching glass while cleaning. DO NOT CLEAN WHILE HOT. Never use common household cleaners to clean the glass.
- Keep the appliance area free from combustible materials, such as paper, wood, clothing, gasoline and flammable solids, liquids and vapors.
- Visually check the height and color of the burner and pilot flames.

Once a year, have a qualified service technician:
- Perform the regular services listed above.
- Inspect and operate the pressure relief mechanism (door buckles) to verify they are free from obstruction and operate properly.
- Carefully remove the logs and gently brush off any loose carbon deposits. This job is best done outside the house, wearing a dust mask. The logs are very fragile, take care not to break them. Do not wash logs with any liquid. While the logs are removed, check that all burner openings are not obstructed and it is recommended you use a vacuum cleaner to clean off any dust or lint.
- Vacuum and clean any lint accumulations or debris in the firebox, on the burners, on the pilot, at the primary air opening, on the convection air blower and in any combustion and convection air passageways.
- After cleaning, the logs and embers must be replaced according to the instructions in this manual.
- Inspect the operation of the flame safety system pilot and gas valve.
- Inspect and ensure the lighting of the main burner occurs within 4 seconds of the main gas valve opening. Flames should match those shown in Figure 18.5.01.
- Completely inspect the appliance and the venting system, if the vent pipe or seal is found to be defective, replace and or reseal (follow the instructions found in the venting instructions, Section 10.0).
- Inspect the condition of the vent and vent terminal for sooting or obstruction and correct if present.
- Test and measure the flame failure response time of the flame safety system. It must de-energize the safety shutoff in no more than 30 seconds.
- Check all accessible gas-carrying tubes, connections, pipes and other components for leaks.

**WARNING:** All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.2 Servicing Under Warranty

Before servicing, read the terms and conditions of the warranty at the back of this manual. Contact the authorized Ambiance dealer where you purchased the appliance from and provide them with details of the problem, along with the initial installation information (from the front of this manual).

**WARNING:** Servicing of this appliance must be conducted by a qualified Ambiance service technician. Improper servicing, adjustment or alteration of this appliance may cause property damage, personal injury or loss of life. All servicing should be conducted with the appliance cold. All replacement parts must be authorized by Ambiance for suitability.

18.3 Checking Inlet and Outlet Pressure

1. Remove the barrier screen (see Section 6.3) and valve access cover (see Section 6.5).
2. The pressure test taps are located on the valve's front face. The inlet is marked "IN" and the outlet is marked "OUT". See Figure 18.3.01.
3. Loosen the set screw inside the tap with a 3/16" flathead screwdriver.
4. Connect a 1/4" (6 mm) rubber tube to the tap post and a manometer.
5. Verify that the readings obtained are within specs (as shown on the appliance rating plate)
6. Be sure to tighten the set screw inside the tap after you have finished taking pressure readings.
7. Check for leaks.

![Figure 18.3.01](image1)

18.4 Checking and Adjusting Pilot

The pilot flames should have the characteristics shown in the illustration to the right.

![Figure 18.4.01](image2)

The flame should not have yellow tips but should engulf the flame sensor and spark electrode. It can be adjusted by turning the screw marked “pilot” on the control valve (See Figure 18.3.01).

![Figure 18.4.02](image3)
18.5 Adjusting the Primary Air

The UF0200 includes an air shutter located under the firebox which may be used to adjust the primary air to achieve the ideal flame as shown in Figure 18.5.01. To adjust, loosen the wing nut on the air shutter and adjust as shown in Figure 18.5.02. To open the air shutter and increase air flow to the burner, slide the air shutter to the left. To close the air shutter and decrease air flow to the burner, slide the air shutter to the right. Tighten the wing nut when the desired flame appearance is achieved.

CAUTION: Do not adjust primary air below specified opening on the rating plate.
18.6 Replacing Batteries
1. Ensure the fireplace is off and cool before servicing.
2. Disconnect power supply to the fireplace (including backup batteries).
3. Turn off gas supply.
4. Remove the barrier screen (see Section 6.3).
5. Remove the valve access cover (see Section 6.5).
6. Remove the battery holder from the side of the control board.
7. Replace the batteries and wrap in the velcro strap.
8. Light the fireplace to verify proper operation. Resupply power once fireplace operation has been confirmed.
9. Replace the valve access cover and barrier screen.

Battery Specifications: 4 x AA Batteries

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.

18.7 Replacing Fuse
1. Ensure the fireplace is off and cool before servicing.
2. Disconnect power supply to the fireplace (including backup batteries).
3. Turn off gas supply.
4. Remove the barrier screen (see Section 6.3).
5. Remove the valve access cover (see Section 6.5).
6. Remove the fuse holder from the control board.
7. Replace the fuse with one which has the same specifications using the existing fuse holder.
8. Resupply power and light the fireplace to verify proper operation.
9. Replace the valve access cover and barrier screen.

Fuse type: T3.15AL250V
Part Number: RP-305-2080

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.8 Replacing Light Bulbs

Caution: Always handle bulbs with cotton gloves as finger prints may reduce the life of the bulb. We recommend replacing both bulbs at the same time.

1. Ensure the fireplace is off and cool before servicing.
2. Disconnect power supply to the fireplace (including back-up batteries).
3. Turn off gas supply.
4. Remove the barrier screen (see Section 6.3).
5. Remove the glass door assembly (see Section 6.4).
6. Remove the old bulb from the bulb holder.
7. Replace with a bulb of the same specifications.
8. Ensure burner media has not been disturbed.
9. Replace glass door assembly and barrier screen.
10. Resupply power.
11. Light the fireplace to verify proper operation. See Section 17.5 for information on using the remote to control the lights.

</tr>
</tbody>
</table>

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.9 Replacing the Control Board

**CAUTION:** Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical code, CSA C22.1.

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Disconnect power supply to the fireplace (including backup batteries)
- Turn off gas supply
- Remove the barrier screen (see Section 6.3)
- Remove the valve access cover (see Section 6.5)

1. Mark all the wires connected to the control board as you unplug them from the control board.
2. Remove the two screws securing the control board to the bracket on the bottom of the fireplace.
3. Install the new control board using the screws previously removed.
4. Plug the wires into the control board.

Final steps:
- Replace the valve access cover (see Section 6.5)
- Replace the barrier screen (see Section 6.3)
- Resupply gas to the fireplace
- Resupply power to the fireplace

**WARNING:** All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance.

Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.10 Wiring Schematic

Figure 18.10.01
18.11 Removing the Masking Plate

The masking plate located in the back of the firebox may need to be removed to install panels or to service the appliance. Use the following instructions to remove the masking plate.

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove barrier screen (see Section 6.3)
- Remove glass door (see Section 6.4)
- Remove burner media (see Section 16.0)
- Remove reflective glass panel set (if applicable - see Section 15.0)

Step 1: Remove the three (3) 1/4" Tek Screws securing the masking plate at the back of the firebox.

Step 2: Pull the masking plate from the firebox.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.12 Removing the Baffle

The baffle located in the top of the firebox may need to be removed to service the appliance. Use the following instructions to remove the baffle.

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove barrier screen (see Section 6.3)
- Remove glass door (see Section 6.4)
- Remove burner media (see Section 16.0)
- Remove panel set (if applicable - see Section 15.0)
- Remove the masking plate (if applicable - see Section 18.11)

**Step 1:** Remove the 1/4” Tek Screw securing the restrictor slider.

**Step 2:** Remove the two (2) 1/4” Tek Screws securing the baffle.

**Step 3:** Drop the front edge of the baffle and lift off the pins in the back of the firebox.

**WARNING:** All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.13 Removing the Restrictor

The restrictor must be removed in high altitude locations when the venting configuration meets certain criteria (see Section 10.1). Use the following instructions to remove the restrictor.

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove barrier screen (see Section 6.3)
- Remove glass door (see Section 6.4)
- Remove burner media (see Section 16.0)
- Remove panel set (if applicable - see Section 15.0)
- Remove the masking plate (if applicable - see Section 18.11)
- Remove the baffle (see Section 18.12)

**Step 1:** Remove the 1/4" Tek Screw securing one side of the restrictor flap.

**Step 2:** Pull the restrictor flap from the opening.

**Step 3:** Reinstall the baffle. Secure the restrictor in Setting 1.

**WARNING:** All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.14 Removing the Burner Surround

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove barrier screen (see Section 6.3)
- Remove glass door (see Section 6.4)
- Remove burner media (see Section 16.0)
- Remove panel set (if applicable - see Section 15.0)
- Remove the masking plate (see Section 18.11)

Step 1: Pull the pilot shield up to remove.

Step 2: Pull the ember ledge up and away from the fireplace.

Step 3: Remove the nine (9) 1/4" Tek Screws securing the burner surround.

Step 4: Pull the burner surround up and out of the fireplace.

Installation is the reverse of removal.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.15 Replacing the Burner

Before you begin:
- Ensure the fireplace is off and cool before servicing
- Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
- Remove the barrier screen (see Section 6.3)
- Remove Glass Door (see Section 6.4)
- Remove burner media (see Section 16.0)
- Remove panel set (if applicable - see Section 15.0)
- Remove the masking plate (see Section 18.11)
- Remove the burner surround (see Section 18.14)

Step 1: Remove the three (3) 1/4" Tek Screws securing the burner to the bottom of the fireplace. Lift the burner up and to the right to remove the plenum from the air shutter.

Figure 18.15.01:

![Image showing the air shutter and the burner with labels indicating the screws and the plenum]

Installation is the reverse of removal.
Check operation of air shutter when reinstalling the burner.
See Section 18.5.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.16 Replacing the Pilot

Before you begin:
• Ensure the fireplace is off and cool before servicing
• Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
• Remove the barrier screen (see Section 6.3)
• Remove Glass Door (see Section 6.4)
• Remove valve access cover (see Section 6.5)
• Remove burner media (see Section 16.0)
• Remove the masking plate (see Section 18.11)
• Remove the burner surround (see Section 18.14)
• Remove the burner (see Section 18.15)

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical code, CSA C22.1.

Step 1: Remove the two (2) 1/4" Tek Screws securing the pilot to the pilot extrusion.

Step 2: Use a 1/2" wrench to hold the pilot and a 7/16" wrench to remove the pilot gas line.

Step 3: Remove the screw securing the ground wire to the pilot.

Step 4: Mark the wires and unplug them from the control board. Route the wires back through the bottom of the fireplace

Step 5: Installation is the reverse of removal. Replace the pilot gasket during install if necessary (see Section 20.0).

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.17 Replacing the Fan

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical code, CSA C22.1.

Before you begin:
• Ensure the fireplace is off and cool before servicing
• Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
• Remove the barrier screen (see Section 6.3)
• Remove Glass Door (see Section 6.4)
• Remove burner media (see Section 16.0)
• Remove panel set (if applicable - see Section 15.0)
• Remove the masking plate (see Section 18.11)
• Remove the burner surround (see Section 18.14)
• Remove the burner (see Section 18.15)

Step 1: Remove the six (6) 1/4" Tek Screws securing the fan access cover.

Step 2: Label and unplug the two fan wires.

Step 3: Unscrew the four (4) wingnuts securing the fan bracket and remove the fan from the fireplace.

Step 4: Remove the three (3) 1/4" Tek Screws securing the fan to the fan bracket.

Installation is the reverse of removal.
Replace gasket on the fan bracket during reinstall if required.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
18.18 Replacing the Light Bases

Before you begin:

• Ensure the fireplace is off and cool before servicing
• Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
• Remove the barrier screen (see Section 6.3)
• Remove Glass Door (see Section 6.4)
• Remove valve access cover (see Section 6.5)

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical code, CSA C22.1.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.

Step 1: Mark the wires and unplug the left side light base from the wire harness located under the valve access cover.

Figure 18.18.01:

Step 2: Repeat at the right side.

Figure 18.18.02:

Step 3: Remove the four (4) 1/4” tek screws securing each light base and light bracket.

Figure 18.18.03:

Step 4: Pull the light base from the fireplace.

Figure 18.18.04:

Installation is the reverse of removal.
18.19 Replacing the Valve

Before you begin:
• Ensure the fireplace is off and cool before servicing
• Ensure the gas supply is turned OFF and disconnect the power supply (including backup batteries)
• Remove the barrier screen (see Section 6.3)
• Remove Glass Door (see Section 6.4)
• Remove valve access cover (see Section 6.5)

Step 1: Mark the wires and disconnect them from the valve. Route the wires back through the bottom of the fireplace.

Step 2: Carefully disconnect the supply gas line, pilot gas line, and main burner gas line.

Step 3: Remove the two (2) wing nuts securing the valve to the bottom shell. One is on the left and one on the right of the valve.

CAUTION: Label all wires prior to disconnection when servicing controls. Wiring errors can cause improper and dangerous operation. Verify proper operation after servicing. This appliance, when installed, must be electrically grounded in accordance with local codes or, in the absence of local codes, with the National Electrical Code, ANSI/NFPA 70, or the Canadian Electrical code, CSA C22.1.

WARNING: All parts removed or disturbed, including guards and grills, must be properly replaced after maintenance. Service and repair must be conducted by a qualified service person. If these instructions are not followed, a fire or explosion may result, causing property damage, personal injury or loss of life.
# Maintenance

## 18.20 Troubleshooting

<table>
<thead>
<tr>
<th>Issue</th>
<th>Solution</th>
</tr>
</thead>
</table>
| The pilot igniter won't spark.                                       | 1. Ensure the ON/OFF override jumper is installed correctly.  
2. Ensure main power is ON and new batteries are installed in the remote control (3 x AAA) and backup battery pack on the control board (4 x AA).  
3. Make sure remote is synced with control board.  
4. Check the 3.15A fuse in the control board. Replace the fuse if necessary.  
5. Make sure remote is not in smart or thermostat mode.  
6. Ensure igniter wire is connected to the control board and is not damaged. |
| The pilot igniter sparking, but the pilot will not light.             | 1. Verify the inlet gas pressure is within acceptable limits.  
2. Check all connections to the gas valve.  
3. Ensure fuel supply valves and emergency shut-off valve are open.  
4. Check wiring connections from control board to valve.  
5. Check that the pilot is set to the correct fuel.  
6. Ensure pilot head is clear of debris. |
| The pilot lights, but the main burner will not light.                 | 1. Check and verify all wiring connections match the wiring diagram.  
2. Verify the inlet and manifold pressure are within acceptable limits. |
| The pilot lights, but the main burner will not light and igniter continues to spark. | 1. Check the pilot flame sensor rod and clean with steel wool or similar if dirty.  
2. Check the pilot hood and clean with steel wool if dirty.  
3. Ensure the flame sensor wire is plugged into the control board and is not damaged.  
4. Adjust pilot flame using the pilot adjustment screw if the pilot flame is too long or too short (the flame should fully engulf the sensor rod and must be stable).  
5. Check supply pressure.  
6. Ensure the ground wire from the pilot is connected to the fireplace ground location. |
| The pilot was lit but will randomly go out.                          | 1. Turn the fireplace on again. If the fireplace is in continuous pilot on demand ignition mode, the system will turn off the pilot if the fireplace has not been used for seven days. You may also switch the fireplace to IPI mode (See Section 19.5).  
2. Have a service technician check for low inlet pressure. |
| The flames on the main burner are low even though the remote is on high.| 1. Wait two minutes. Dynamic Start Advantage is designed to build a draft by starting on low and automatically increasing the flame size to the setting on the remote after two minutes. This system helps to create a better flame appearance, reduce condensation on the glass, and provide years of carefree operation.  
2. Have a service technician check for low inlet pressure.  
3. Replace the valve motor. |
| Fans do not work.                                                    | 1. Ensure main power is ON and the fireplace is plugged in (the fireplace may be operating on back up batteries).  
2. Check the 3.15A fuse in the control board and replace if necessary.  
3. Ensure the fans are connected to the control board. |
| Lights do not work.                                                  | 1. Ensure main power is ON and the fireplace is plugged in (the fireplace may be operating on back up batteries).  
2. Check the 3.15A fuse in the control board and replace if necessary.  
3. Ensure the lights are connected to the control board.  
4. Replace the bulbs (bulbs may be burnt out). |
| Control module beeps twice when On/Off button on remote is pressed and Red LED is On. | 1. Replace batteries in remote battery pack. |

All service and repairs should be performed by a qualified and licensed service technician.
19.0 Frequently Asked Questions

Listed below are some frequently asked questions regarding Ambiance Gas Fireplaces. If you have questions that are not listed below, or are not answered in this manual, please contact your Authorized Ambiance Dealer.

Q. Why does my glass have a condensation “fog” when the appliance is first lit?
A. Condensation is normal and will disappear in a few minutes after the glass is heated. This can be reduced if the appliance is left in CPI mode.

Q. I have a white “film” on my glass. What is the best way to clean the inside of the glass?
A. Frequent cleaning of your glass is recommended. The white film cannot be removed using standard household glass cleaner. We recommend using a good quality, ammonia-free gas fireplace glass cleaner which is available at all authorized Ambiance dealers. Do not use abrasive materials, and do not clean the glass or the appliance when the unit is hot. Never use ammonia based cleaners to clean the glass door.

Q. How do I care for my plated trims?
A. We recommend a cleaning with a damp cloth. DO NOT use chemical cleaners as they may harm the finish, and void your warranty. **NOTE:** If the top louvers, or top overlay starts to discolor, check the glass door gasket seal and contact your local Ambiance dealer to replace if necessary.

Q. Why does my fan/blower make a “whirring” or “humming” noise?
A. Your Ambiance gas appliance uses a powerful fan to push heated air into your room. It is not unusual to hear a “humming” noise when your fan is running. Note: the sound will change depending on the setting that your fan speed control is set at.

Q. I hear a “ticking”, “cracking” or “pinging” sound when my fireplace is running, and after it is turned off. Why?
A. The different gauges of steel used to manufacture your fireplace will expand and contract at different rates when your fireplace is on, and will continued as your fireplace completes its heating function. You will likely hear these same sounds more on start up and shut down. This is normal for steel fireplaces.

Q. Why do I hear a “click” when my main burner turns ON or OFF?
A. Your Gas Control Valve will make a clicking sound when it opens to allow gas to flow to the main burner. This is a normal part of the operating system.

Q. Can I burn wood and other materials in my gas fireplace?
A. No! Burning anything other than the fuel (natural gas or propane) the fireplace is setup for will create a potential fire hazard and present a danger to your home and its occupants and possibly void your manufacturer's warranty. Only burn the gas fuel for which the unit was originally designed.

Q. Can I shut my pilot off in the summer?
A. You will save energy by turning off the pilot light if you are not using your appliance for the hot summer months. When in continuous pilot ignition on demand (CPI) mode the pilot will remain lit for seven days after the fireplace is used. When seven days have passed the system will turn the pilot off. When in IPI mode, the pilot will only remain on when the main burner is on.

Q. Why does my fireplace start with a low flame? Shouldn’t the flame size match the remote setting?
A. Dynamic Start Advantage was designed to create a draft by starting the fireplace on low and automatically increasing the flame to match the remote setting after two minutes. This system helps to create a better flame appearance, reduce condensation on the glass, and provide years of carefree operation.

Q. Can I position my logs in a different fashion or use a different log set?
A. No. Your gas fireplace is an engineered system that includes the firebox, burner, logs, venting and options which are tested and listed with a certification agency. Changing any specifications or placement of the logs could cause injury or damage, void your manufacturer's warranty, and possibly even your homeowner's warranty. Use only burner media that is approved for this fireplace. Contact your local Ambiance dealer for information on burner media that is approved for this model.

Ambiance Limited Warranty

10 Year Limited Warranty

This Limited 10 Year Warranty will not become effective until the Warranty Registration Form has been completed and mailed to Archgard Industries, 7116 Beatty Drive, Mission, BC, Canada, V2V 6B4. This registration form must be received within 30 days of installation. Failure to do so may result in delayed warranty coverage and submission of proof of purchase will be required.

Archgard Industries warranties to the original purchaser of this Ambiance Fireplace, that it is free of defects in materials and workmanship at the time of manufacture.

Subject to the following conditions & requirements, Archgard Industries extends the following limited warranty under normal use and service, with respect to the Ambiance line of gas burning fireplaces.

YEAR 1: Subject to the conditions & requirements listed below, within the first year from date of purchase, Archgard Industries shall, at it’s discretion, replace or repair any such defect in material or workmanship, at Archgard Industries’ expense, including scheduled labor costs to repair or replace the defective component, if a factory pre-authorization is given for the repair.

YEAR 2-10: Subject to the conditions & requirements listed below, beginning with the first day of the second year and continuing through the tenth year, Archgard Industries, will at it’s discretion, provide repair or replacement parts at current list prices for any defect in material or workmanship of components, including optional components and accessories (if available). Archgard Industries shall not be responsible for any installation, labor, transportation or other indirect costs.

LIMITATION OF LIABILITY

To make a claim under this warranty, the purchaser must first contact the dealer/installer from whom the fireplace was purchased.

This limited warranty shall be void if the fireplace is not installed by a qualified installer and according to the installation instructions. Use of unauthorized components will make this warranty null and void.

This warranty also is void if the fireplace is not operated, at all times, according to the operating instructions furnished.

No person is authorized to extend the time of this warranty or to accept on Archgard Industries’ behalf any additional obligation of liability connected with the unit.

It is expressly agreed and understood that this warranty is Archgard Industries’ sole obligation and purchaser’s exclusive remedy for defective fireplace equipment. Archgard Industries shall not be liable for any consequential, incidental or contingent damages whatsoever. The foregoing warranty is exclusive and in lieu of all other expressed warranties. Archgard Industries shall not be held to implied warranties or merchantability and fitness for a particular purpose. This warranty replaces all previous warranty policies.

Some states do not allow the exclusion or limitation of incidental or consequential damages or limitations on how long an implied warranty lasts, so the above limitations or exclusions may not apply to you. This warranty gives you specific legal rights and you may also have other rights which vary from state to state.

Archgard Industries reserves the right to make changes at any time, without notice, in design, material, specifications and prices.

Archgard Industries reserves the right to discontinue models and products.

WARRANTY CONDITIONS & REQUIREMENTS

1. You are the original purchaser. This warranty is not transferable.
2. Installation of the fireplace is performed by a qualified installer.
3. Installation and operation must comply with installation and operation instructions.
4. Paint and glass gaskets are covered for 30 days from the date of purchase.
5. Remote controls and all optional accessories are covered for 1 year from date of purchase.
6. This warranty does not offer coverage for Light Bulbs or Batteries (whether factory, dealer or installer supplied). This includes any damage stemming from either components nonuse.
7. Components broken (including glass panels), during shipping, careless handling of components, or defects resulting from improper installation, misuse of the fireplace and components are not covered under this warranty.
8. This warranty does not cover any part of the fireplace or any component which have been exposed to or submerged under water.
9. Archgard Industries must be notified by the dealer the fireplace was purchased from or a qualified installer/service technician of the defect.
10. Annual service of the fireplace as required in the installation manual, is performed by a qualified installer/service technician (Copies of such service records may be required to claim a warranty).
11. All previous warranty/service has been performed by a qualified installer or service technician (Copies of such service records may be required to claim a warranty).
Lifetime Warranty

THIS LIFETIME WARRANTY COVERAGE WILL BE EXTENDED AS DESCRIBED BELOW PROVIDED ALL WARRANTY CONDITIONS AND REQUIREMENTS ARE MET AS OUTLINED IN THE 10 YEAR LIMITED WARRANTY POLICY.

LIFETIME WARRANTY COVERAGE

LIFETIME WARRANTY IS EXTENDED AS FOLLOWS: Archgard Industries warrants to the original purchaser that the firebox, heat exchanger, fibre logs, pan burner and glass panel of this Ambiance Fireplace will not be defective in the material or workmanship under normal use and service as long as you own this product. If any of these components fail due to defects in material and workmanship under normal use and service, Archgard Industries will, at its sole discretion, repair or replace the defective component. This LIFETIME WARRANTY does not cover any installation, labor, transportation or other indirect costs arising from defective components.

LIMITATION OF LIABILITY

This Lifetime Warranty will be void if the fireplace is not installed by a qualified installer and according to the installation instructions. Use of unauthorized components will make this warranty null and void. This Lifetime Warranty also is void if the fireplace is not operated, at all times, according to the operating instructions furnished. This warranty is limited to defects in material and workmanship of components specified. It does not apply to any product that has been subject to negligence, misapplication, improper installation.

No person is authorized to extend the time of this Lifetime Warranty or to accept on Archgard Industries’ behalf any additional obligation of liability connected to this unit.

Archgard Industries may fully discharge all obligations with respect to this Lifetime Warranty by refunding the wholesale price of the defective component(s).

It is expressly agreed and understood that this Lifetime Warranty is Archgard Industries’ sole obligation and original purchaser’s exclusive remedy for defective fireplace equipment. Archgard Industries shall not be liable for any consequential, incidental or contingent damages whatsoever other than those incurred by Archgard Industries to repair or replace the defective component. The foregoing warranty is exclusive and in lieu of all other expressed warranties. Archgard Industries shall not be held to implied warranties, including but not limited to the implied warranties of merchantability and fitness for a particular purpose. This lifetime warranty replaces all previous warranty policies.

Archgard Industries reserves the right to make changes at any time, without notice, in design, material, specifications and prices.

Archgard Industries reserves the right to discontinue models and products.

To activate this LIFETIME WARRANTY coverage, the registration card must be completed and mailed to the following address within 30 days of installation:
