Luxus® 40 High	48″	16.5″	84″

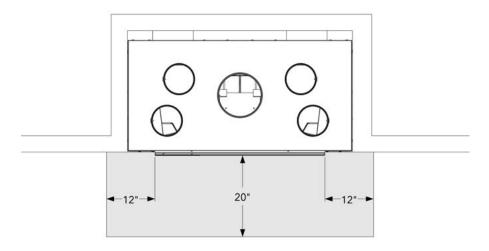

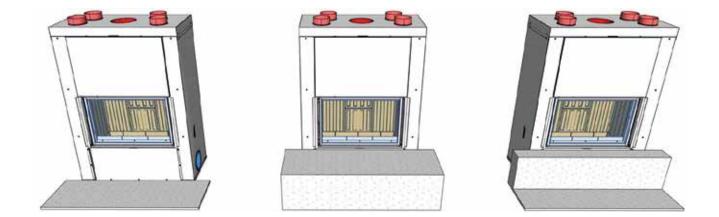

Hearth extension

INSTALL THE HEARTH EXTENSION ONLY AS ILLUSTRATED!

A 20″ x 12″ (500 mm x 300 mm) minimum hearth extension made of non combustible material is required. Minimum dimensions of non-combustible hearth extension measured from door glass.

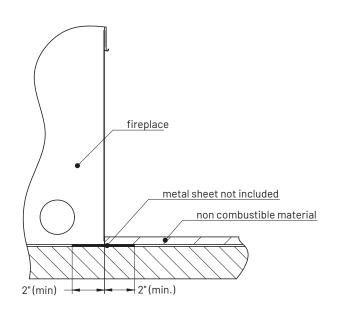

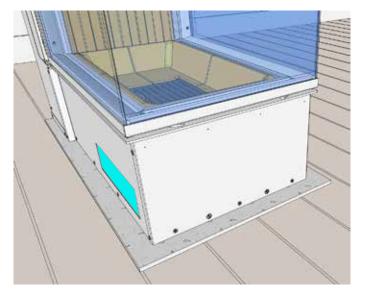

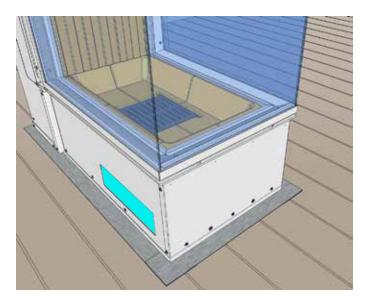

Hearth extension

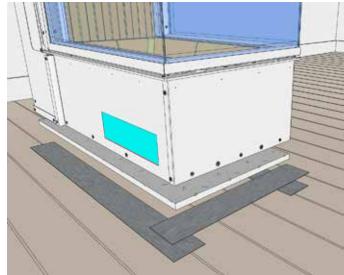

To prevent any burning embers from coming in contact with the floor (between the fireplace and the hearth extension), insert a metal sheet under the front of the fireplace. This sheet must extend 4" (100 mm) on both sides of the fireplace and 2" (50mm) in front. You can also prevent embers from falling in the joint between the fireplace and the hearth extension by filling it with mortar grout.

Example: Luxus® Pier 28 ½" cement board on floor

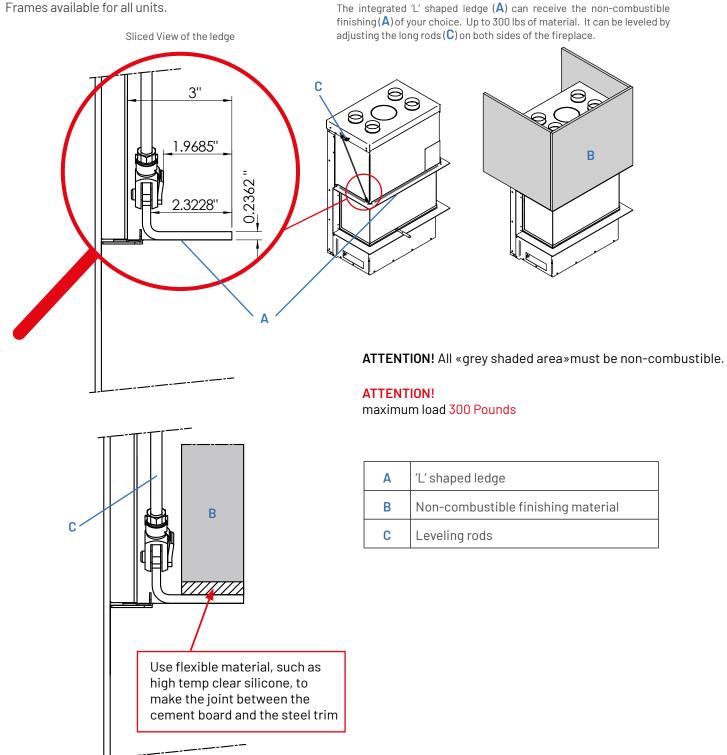

Example: Luxus[®] Pier 28 On Floor ½" cement board and metal ember strip

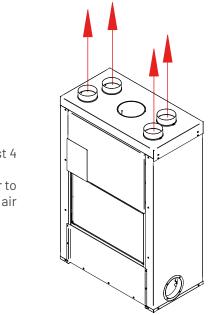

Frames

Frames available for all units.

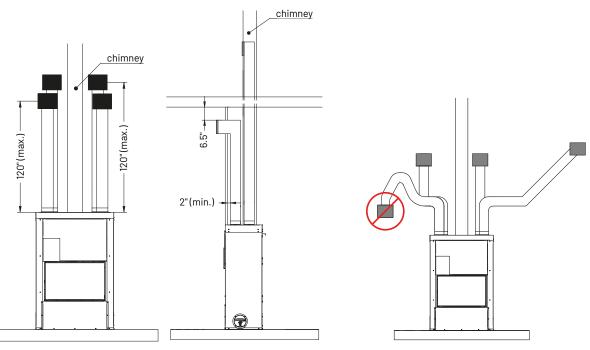

Minimum clearances to combustibles for convection air grills

Connect at least 4 gravity outlets 6 inch diameter to the convection air outlet ports.

The minimum distance between the convection air grills and the ceiling or other combustibles is 6.5 inches. Only use non combustible materials 6.5 inch surrounding the convection air grills.

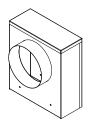

For installation use flexible aluminium liner with 1 inch insultation.

The Gravity Distribution Kit may be used to heat rooms located above, behind and either side of the room where the fireplace is located. Note that, if the hot air outlets are located at various levels, the heat will tend to seek the one at the highest level. It is not permitted to connect two ducts together.

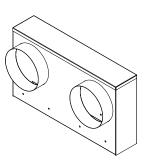

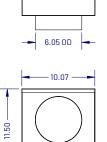

Convection Air Distribution (Plenums)

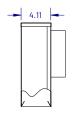

One Inlet Plenum

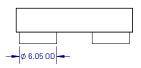

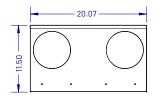

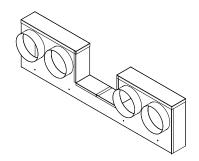

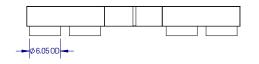

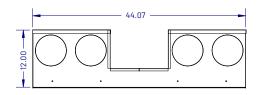

Four Inlets Plenum

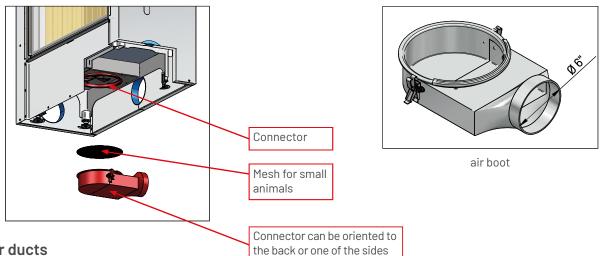

Fresh air intake

To connect the fresh air directly to the firebox, it is recommended to use the 'air boot' combustion air connector Ø 6" (A # 1018173). Mount the connector directly to the unit. It must be oriented to the back or one side (left for 'Corner Right' units, and right for 'Corner Left' units).

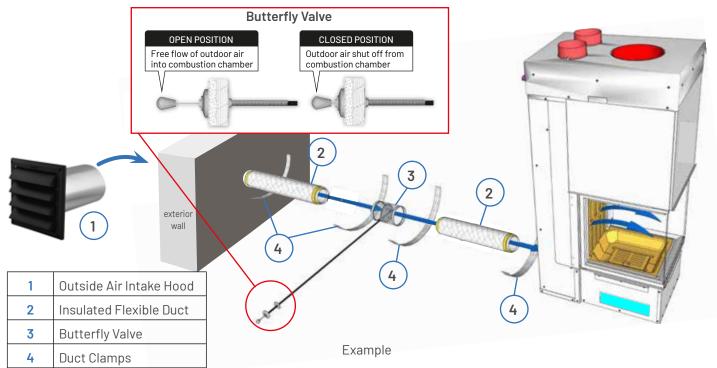

Fresh air ducts

The fresh air ducts should be kept as short as possible to prevent pressure loss and to prevent cold from coming in.

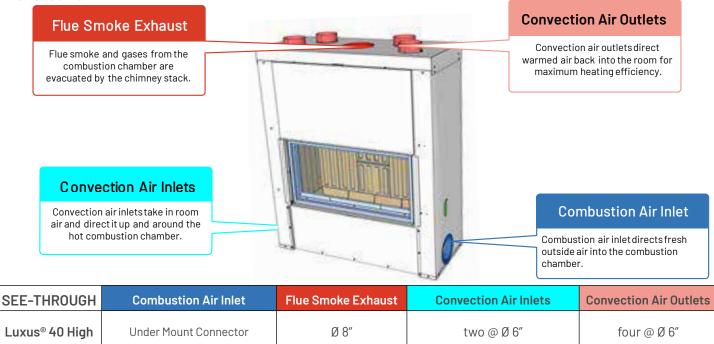

Butterfly valve

If you decide to connect separate combustion air it is recommended to install a butterfly valve to prevent condensation and avoid cold air from coming in when the fireplace is not in use. It should ideally be located as close as possible to the outside wall. It can be controlled from inside if it is not too far from the stove (cable length = 47"). DAMPER MUST BE FULLY OPEN WHEN FIREPLACE IS OPERATIONAL.

Inlet & Outlet

Chimney installation

This fireplace is designed and approved for installation with the following brands of chimneys measuring 10" (250 mm) in diameter as well as a minimum of 15' (4.6 m) and maximum of 45' (13.5 m) in height. (The anchor plate is not included with the unit. Use only a chimney certified as UL 103HT or ULC S-629.)

Chimney Manufacturer	Brand	Туре	Tested and Listed to	Inner Diameter

Transportation locks

Unlock transportation lock

Once the fireplace has been taken off the crate, unlock the counterweights using a socket-wrench size 13mm or ½". Remember to perform this operation before inserting the fireplace into the enclosure.

To unlock the transportation lock, open the cover. Then loosen the screw with the socket wrench. Turn the socket wrench to the left. Then close the cover. Do this on both sides.

Ambiance® Fireplaces, BBQ, Outdoors & Spas www.ambiancefireplaces.com

Door opening

Use the «operational tool» to open and close the door

Operational tool

Position the «operational tool» on the connection point

CAUTION!

The «operation tool» has a spring. If you let go the «operation tool», it jumps back from the connection point.

The «operation tool» is heavy. Do not drop it on the floor or on your foot.

Move the door up and down
